- All details for this course can be found on Moodle
- <http://moodle.rhul.ac.uk/>
- I will attempt to create a slidecast of each lecture that will be placed on moodle as well.

Who am I ?

Topic 1:
Introduction,
Vectors

1: 3/27

- Hugh Shanahan (but you can call me Hugh).
- My office is in the Bedford Building.
- Here are my office hours - please come by the admin office and ask them to give me a call.
- Monday 15-16
- Tuesday 15-16
- If you want some guaranteed time with me to answer question etc., please email me to arrange an appointment.

Assignments

Topic 1:
Introduction,
Vectors

1: 4 / 27

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

- Three quizzes - each worth 10% of the final grade.
- Each quiz will be 30 minutes in length so it can be done in an hour slot.
- A practice quiz will be set up this week.
- Deadlines are available on

Exam

- Answer all questions !

Topic 1:
Introduction,
Vectors

1: 5/27

The number
line

Two
dimensions

Labs

Topic 1:
Introduction,
Vectors

1: 6/27

- Labs will run on a weekly basis.
- Thursday 10-12, Bedford 0-04 to 0-06, PC01.
- Class will be divided into two; each one taking one hour.
- No lab this week.
- We'll be using Python and NumPy for this course.
- More specifically we will be using Jupyter notebooks and Binder.

Preamble

Motivation

Background
Mathematics

The number
line

Two
dimensions

Motivation

Topic 1:
Introduction,
Vectors

1: 7/27

- This course will focus on one, very regular class of data structures.
- Namely, vectors and matrices with almost invariably floating point entries.
- Linear Algebra is the branch of Mathematics to deal with this.
- Why bother??

Linear Algebra

Topic 1:
Introduction,
Vectors

1: 8/27

- Linear Algebra is a vast branch of Mathematics with hugely powerful tools for us to use.
- Linear Algebra has a number of direct applications in Computer Science and every Computer Scientist should understand it. For example
 - Computer Graphics
 - Computer Vision
 - Machine Learning and Artificial Intelligence
 - Graph Theory

Vectors

1: 9/27

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

- This course is shamelessly Mathematical BUT
- I assume no prior knowledge of Linear Algebra.
- It is very much grounded in concrete examples from CS.

Mathematics

Trigonometry

Topic 1:
Introduction,
Vectors

1: 12/27

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

$$\cos \theta = \frac{a}{h} \quad , \quad \sin \theta = \frac{o}{h} \quad , \quad (1.1)$$

$$\cos(-\theta) = \cos \theta \quad , \quad \sin(-\theta) = -\sin \theta \quad (1.2)$$

$$\cos^2 \theta + \sin^2 \theta = 1 \quad , \quad (1.3)$$

$$\sin(a + b) = \sin a \cos b + \cos a \sin b \quad , \quad (1.4)$$

$$\cos(a + b) = \cos a \cos b - \sin a \sin b \quad . \quad (1.5)$$

The number line

Topic 1:
Introduction,
Vectors

1: 13/27

First steps in understanding numbers (\mathbb{Z}).

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

The reals

Topic 1:
Introduction,
Vectors

1: 14/27

Can add in reals easily in this picture ... (\mathbb{R}).

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

Direction

Topic 1:
Introduction,
Vectors

1: 15/27

Can think of an arrow from the origin to each number on the number line.

Arrow is length 4.5 going in a positive direction.

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

Direction

Topic 1:
Introduction,
Vectors

1: 16/27

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

Other arrow is length 1.66 going in a negative direction.

Operations - scaling

Topic 1:
Introduction,
Vectors

1: 17/27

Can scale the length of an arrow.

Arrow of length 4.5 is scaled by a factor 1.5.

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

Operations - addition

Topic 1:
Introduction,
Vectors

1: 18/27

Can add arrows - just put "tail to head".

Arrow of length 4.5 going in positive direction plus arrow of length 2.5 going in a negative direction results in an arrow of length 2.0 going in a positive direction.

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

Operations - product

Topic 1:
Introduction,
Vectors

1: 19/27

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

Multiplying the signs tells us if the arrows are going in the same or opposite direction.

Adding another number line

Move into 2 dimensions.

Topic 1:
Introduction,
Vectors

1: 20/27

Preamble

Motivation

Definitions
and
Background
Mathematics

The number
line

Two
dimensions

Moving up a dimension

Topic 1:
Introduction,
Vectors

1: 21 / 27

- Instead of a position on the number line. You now have **coordinates**, represented by a pair of numbers (a, b) .
- For the most part we will assume that these numbers are reals $a \in \mathbb{R}$, $b \in \mathbb{R}$.
- Formally, these are elements of the Cartesian product $\mathbb{R} \times \mathbb{R}$ (go and check your CS1860 notes).
- But we could have grids which are $\mathbb{N} \times \mathbb{N}$, $\mathbb{Z} \times \mathbb{Z}$, $\mathbb{C} \times \mathbb{C}$ and so on.

Notation contd.

In textbooks you will also see the following alternatives

$$\mathbf{v} , \vec{v}$$

they all mean the same thing - a vector !

If we want a vector in row form then there is an explicit operation to get that.

$$\underline{v}^T = (-4.67 \quad 0.76) \quad (1.8)$$
